Smart Stock UX Mock-up Presentation

Problem Statement

- Small scale restaurants are trapped in technology gap, forced to rely on error prone, manual inventory

Our Solution

- cloud-based, *AI-powered* inventory platform
- historical sales and inventory data
- A natural language processing (NLP) assistant

Scope

In-scope components and core functionalities

- Track inventory in real-time, monitor expiry dates, receive alerts for low-stock, includes AI forecasting feature suggesting reorder quantities and lowest price comparison.

Out-of Scope components

- Cannot process payments, manage payroll and scheduling and placing orders for stock.

Context Diagram

Project Scope: Defines the Smart Stock system limits and its interactions with external environments.

- **Key External Entities:**
  - **Admin:** Manages configurations and monitors business performance via dashboards.
  - **Employee:** Handles daily inventory updates and natural language (NLP) queries.
  - **AI Orchestrator:** External engine for demand forecasting and intelligent responses.
  - **LocalSupplier (API):** Real time source for ingredient pricing and market availability.
- **Primary Value Loop:**
  - **Input:** Historical sales data and manual inventory counts.
  - **Output:** Automated low-stock alerts and predictive procurement reports.
